6 DEMONSTRATE LINUX PRIVILEGE ESCALATION

AIM

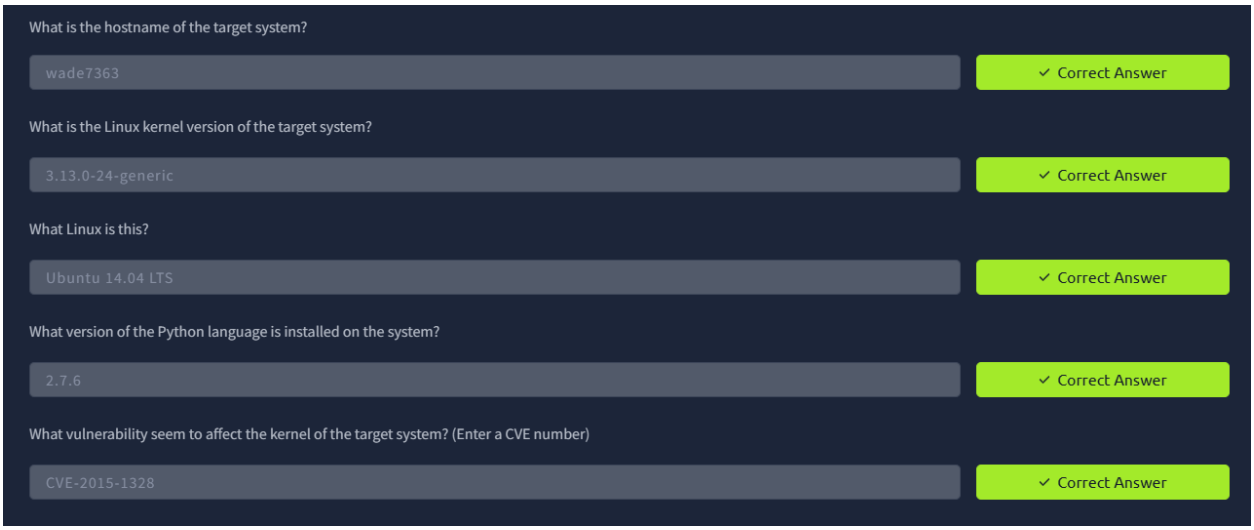
To understand Linux privilege escalation techniques and learn how to identify and exploit common misconfigurations to gain higher privileges in the TryHackMe room “Linux PrivEsc.”

PROCEDURE

1. Open the TryHackMe room “Linux PrivEsc” and study the basics of Linux privilege escalation.
2. Learn different techniques such as exploiting sudo permissions, SUID binaries, cron jobs, and weak file permissions.
3. Analyze system configurations and identify possible privilege escalation paths.
4. Complete the tasks and gain root access using the given methods.

QUESTIONS

TASK 3 – Enumeration



TASK 5 – Privilege Escalation: Kernel exploits

TASK 6 – Privilege Escalation: Sudo

How many programs can the user "karen" run on the target system with sudo rights?

3 ✓ Correct Answer

What is the content of the flag2.txt file?

THM-402028394 ✓ Correct Answer

How would you use Nmap to spawn a root shell if your user had sudo rights on nmap?

sudo nmap --interactive ✓ Correct Answer

What is the hash of frank's password?

$6$2.sUUDsOLIpXKxcr$eImtgFExyr2ls4jsghdD3DHLHHP9X50Iv.jNmwo/BJpphrPRJWjelWEz2HH.joV14aDEwW1c3CahzB1uaq ✓ Correct Answer

TASK 7 – Privilege Escalation: SUID

Which user shares the name of a great comic book writer?

gerryconway ✓ Correct Answer

What is the password of user2?

Password1 ✓ Correct Answer

What is the content of the flag3.txt file?

THM-3847834 ✓ Correct Answer

TASK 8 – Privilege Escalation: Capabilities

Complete the task described above on the target system

No answer needed ✓ Correct Answer

How many binaries have set capabilities?

6 ✓ Correct Answer

What other binary can be used through its capabilities?

view ✓ Correct Answer

What is the content of the flag4.txt file?

THM-9349843 ✓ Correct Answer

TASK 9 – Privilege Escalation: Cron Jobs

How many user-defined cron jobs can you see on the target system?

4 ✓ Correct Answer

What is the content of the flag5.txt file?

THM-383000283 ✓ Correct Answer

What is Matt's password?

123456 ✓ Correct Answer

TASK 10 – Privilege Escalation: PATH

What is the odd folder you have write access for?

/home/murdoch ✓ Correct Answer

Exploit the $PATH vulnerability to read the content of the flag6.txt file.

No answer needed ✓ Correct Answer

What is the content of the flag6.txt file?

THM-736628929 ✓ Correct Answer

TASK 11 – Privilege Escalation: NFS

How many mountable shares can you identify on the target system?

3 ✓ Correct Answer

How many shares have the "no_root_squash" option enabled?

3 ✓ Correct Answer

Gain a root shell on the target system

No answer needed ✓ Correct Answer

What is the content of the flag7.txt file?

THM-89384012 ✓ Correct Answer

TASK 12 – Capstone Challenge

RESULT

Successfully learned various Linux privilege escalation techniques and understood how misconfigurations in Linux systems can be used to gain root privileges.
